Warning and Caution

- If the product does not work properly, please contact your dealer or the nearest service center. Never attempt to disassemble the camera yourself. (We shall not be responsible for any problems caused by unauthorized repair or maintenance.)
- Keep away from liquid while in use.
- In the use of the product, you must be strict compliance with the electrical safety regulations of the nation and region. When the product is mounted on wall, the device shall be firmly fixed.
- Do not use camera beyond specified voltage range.
- Do not drop the camera or subject it to physical shock.
- Avoid touching the camera lens.
- If cleaning is necessary, please use clean cloth to wipe it gently.
- Do not aim the camera at the sun or extra bright place.
- Do not place the camera in extremely hot, cold, dusty or damp locations, and do not expose it to high electromagnetic radiation.
- To avoid heat accumulation, good ventilation is required for operating environment.

1. Overview

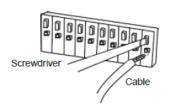

1	Power port (DC 12V / AC 24V)	7	Ethernet connector (PoE)	
2	Power indicator	8	Micro SD card slot	
3	RS-485; connectors for PTZ	9	Audio input	
4	Alarm output	10	Audio output	
5	Alarm input	11	Default button	
6	Ground	12	Video output	

Note:

- 1. The camera can be powered by DC 12V / PoE power supply. If the PoE switch is used to power the camera, DC 12V power supply is not required.
- 2. To load default settings, press and hold the default button for 10 seconds.

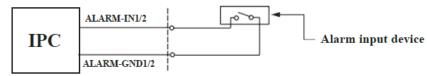

RS 485/ Alarm input/Output Cable Connection

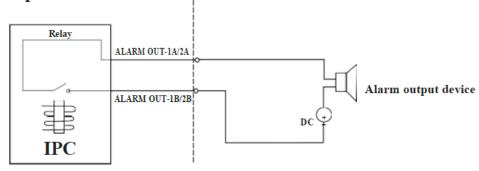

Use the small slotted screwdriver to press the corresponding button. Then insert the cable into the cable groove. After that, release the screwdriver.

Alarm Output:

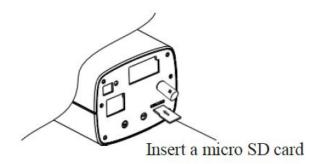

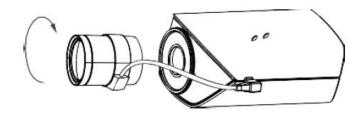

2. Installation

Please make sure that the wall or ceiling is strong enough to withstand 3 times the weight of the camera. Install the camera under dry environment. Here we take wall mounting for example.

1. Insert a micro SD card into the card slot.

2. Remove the protection cover of the lens interface and install the lens (not supplied) to the camera. Rotate the lens clockwise until it is fixed firmly. Plug the cable of auto iris to the auto iris interface of the camera.

Note: It is not required to plug the power cable of the auto iris to the auto iris interface if a manual iris lens is used.

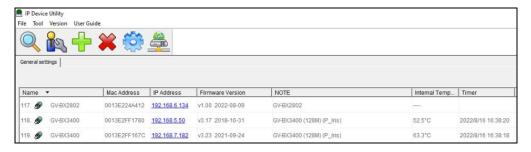

3. Accessing the Network Camera

3.1 Looking Up the Dynamic IP Address

By default, when the camera is connected to a LAN with the DHCP server, it is automatically assigned with a dynamic IP address. Follow the steps below to look up its IP address.

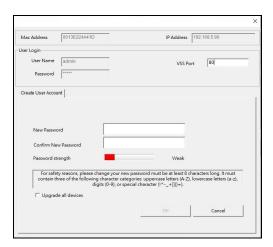

Note:

- 1. By default, the Administrator's username is **admin** and cannot be modified.
- 2. This function is only applicable on GV-IP Device Utility V8.9.8 or later.
- 1. Make sure the PC used to configure the IP address is under the same LAN as the camera. Download and install **GV-IP Device Utility** from the company <u>website</u>.
- 2. On the GV-IP Utility window, click the utton to search for the IP devices connected in the same LAN. Click the **Name** or **Mac Address** column to sort.
- 3. Find the camera with its Mac Address, and click on its IP address.

4. For first-time users, you are requested to create a password.

- 5. Type a new password and click **OK**.
- 6. Click on its IP address again and select **Webpage** to open its Web interface.
- 7. Type the set password on the login page and click **Login**.

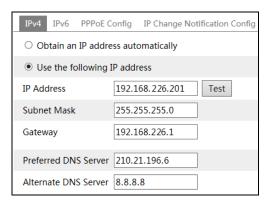

Note: To change the password using GV-IP Device Utility, click on the camera's IP address, and select Configure > Change Password. Or you can optionally change the password on the camera's Web interface by clicking Config → Security → User; see "Modify User" in 4.7.1 Security Configuration in the user's manual.

3.2 Configuring the IP Address

If the camera is connected to a LAN without the DHCP server, the default IP address will be **192.168.0.10**. Follow the steps below to modify the IP address to avoid IP conflict with other GV-IP devices on the same LAN.

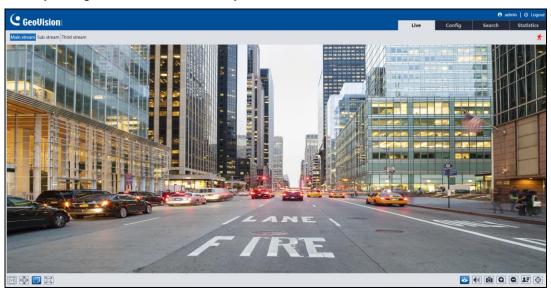

- 1. Open your Web browser, and type the default IP address 192.168.0.10.
- 2. Type the default username **admin** and a password. Click **Login**.
- 3. Go to Config > Network > TCP/IP to set the IP address.
- 4. Select **Use the following IP address** and then enter the static IP address and other parameters.

4. The Web Interface

Once you log in the Web interface, you will see the live view as shown below.

Icon	Description	Icon	Description
$\boxed{\times 1}$	Original size	((1))	Sensor alarm indicator
	Fit correct scale	东	Motion alarm indicator
	Adapt	U	Color abnormal indicator
	Full screen		Abnormal clarity indicator
*	Start/stop live view	88	Scene change indicator
U	Start/stop two-way audio		Line Crossing indicator
(1)	Enable/disable audio	8	Region Intrusion indicator
Ô	Snapshot	~	Region Entrance indicator
	Start/stop local recording	•	Region Exiting indicator
Q	Zoom in		Face detection indicator
	Zoom out	<u>~</u>	Target Counting by Line indicator
	PTZ control		Target Counting by Area indicator
2 F	Face Detection		Object detection indicator (object Abandoned/Missing)
lacktriangle	Rule information display		Heat map indicator
S	SD card recording indicator		

For detailed information, see the user's manual.

5. Upgrading System Firmware

GeoVision periodically releases updated firmware on the company <u>website</u>. To load the new firmware into the camera, follow the instructions below.

1. On the Web interface, click **Config > Maintenance > Upgrade.**

- 2. Click the **Browse** button to locate the firmware file saved at your local computer.
- 3. Click the **Upgrade** button to start upgrading the firmware.
- 4. After upgrading, the camera will restart automatically.

Note: Do not close the browser or disconnect the camera from the network during the upgrade.

6. Restoring to Factory Default

If for any reason the camera is not responding correctly, you can restore the camera back to its factory default settings using the Web interface or the Load Default Button.

On the Camera

- 1. Find the **Load Default** button on the camera (see No. 11, *1. Overview* in the Quick Start Guide).
- Press and hold the button for more than 10 seconds to restore to the factory default setting.

On the Web Interface

- 1. On the Web interface, click **Config >Maintenance > Backup & Restore**.
- 2. Click the **Load Default** button to restore all system settings to factory default, except the image settings (see *4.2 Image Configuration* in the *User's Manual* for details) you want to keep.
